

## ENVIRONMENTAL PRODUCT DECLARATION

# HOT ROLLED STRUCTURAL STEEL PLATE

Hot rolled structural steel plates include “Hot Rolled H-Beam”, “Checkered H-Beam”, “Channel Beam” and “U-type sheet piles”.

### TUNG HO STEEL ENTERPRISE CORP.

From its beginnings in “Tung Ho Hang” to today's Tung Ho Steel Enterprise Corporation, the company has always made trustworthiness the company's spiritual essence in its business. The company's core business values and objectives are embodied in the pursuit of exceptional contributions to society. Trustworthiness does not merely represent the company's trustworthiness in relation to outside parties, customers, and society, but also signifies trustworthiness in its employees and in itself.

In response to global warming, in order to effectively mitigate the impacts of climate change, Tung Ho Steel is actively promoting energy conservation and CO<sub>2</sub> reductions, as well as proactively disclosing the carbon footprint information for its products.

Through product carbon footprint inventory, it is possible to learn about the greenhouse gas emissions throughout a product's lifecycle. This enables effective problem identification and implementation of low-carbon and energy-conserving design philosophies to increase service competitiveness.

DECLARED PRODUCT & FUNCTIONAL UNIT OR DECLARED UNIT	HOT ROLLED STRUCTURAL STEEL PLATE Declared Unit: 1 metric ton
REFERENCE PCR AND VERSION NUMBER	Construction Products PCR 2019:14 version 2.0.1
DESCRIPTION OF PRODUCT APPLICATION/USE	"Plate-type steel products from billet through hot-rolling production processes have optimal steel strength and resilience, good weldability, and are easily processed into components of various complex shapes. The narrow plate steel produced by Tung Ho Steel can be manufactured according to the width requirements of customers. Without the need to make further cuts, energy and material consumption are further reduced, with greater convenience when integrating the materials into construction and faster handover periods. The product can be broadly utilized in factories, logistics warehouses, office and residential buildings, bridges, and other buildings."

This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by:

Ik-Kim, Smart-Eco

## LIMITATIONS

**Exclusions:** EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc.

**Accuracy of Results:** EPDs regularly rely on estimations of impacts; the level of accuracy in estimation of effect differs for any particular product line and reported impact.

**Comparability:** EPDs from different programs may not be comparable. Full conformance with a PCR allows EPD comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible". Example of variations: Different LCA software and background LCI datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

HOT ROLLED STRUCTURAL STEEL PLATE

According to ISO 14025,  
EN 15804 + A2

## 1. Product Definition and Information

### 1.1. Description of Company/Organization

From its beginnings in "Tung Ho Hang" to today's Tung Ho Steel Enterprise Corporation, the company has always made trustworthiness the company's spiritual essence in its business. The company's core business values and objectives are embodied in the pursuit of exceptional contributions to society.

Trustworthiness does not merely represent the company's trustworthiness in relation to outside parties, customers, and society, but also signifies trustworthiness in its employees and in itself.

In response to global warming, in order to effectively mitigate the impacts of climate change, Tung Ho Steel is actively promoting energy conservation and CO<sub>2</sub> reductions, as well as proactively disclosing the carbon footprint information for its products. Through product carbon footprint inventory, it is possible to learn about the greenhouse gas emissions throughout a product's lifecycle. This enables effective problem identification and implementation of low-carbon and energy-conserving design philosophies to increase service competitiveness.

### 1.2. Product Description

#### Product Identification

"Plate-type steel products from billet through hot-rolling production processes have optimal steel strength and resilience, good weldability, and are easily processed into components of various complex shapes.

# ENVIRONMENTAL PRODUCT DECLARATION

**TUNG HO STEEL ENTERPRISE CORP.**

HOT ROLLED STRUCTURAL STEEL PLATE

According to ISO 14025,  
EN 15804 + A2

## Flow Diagram

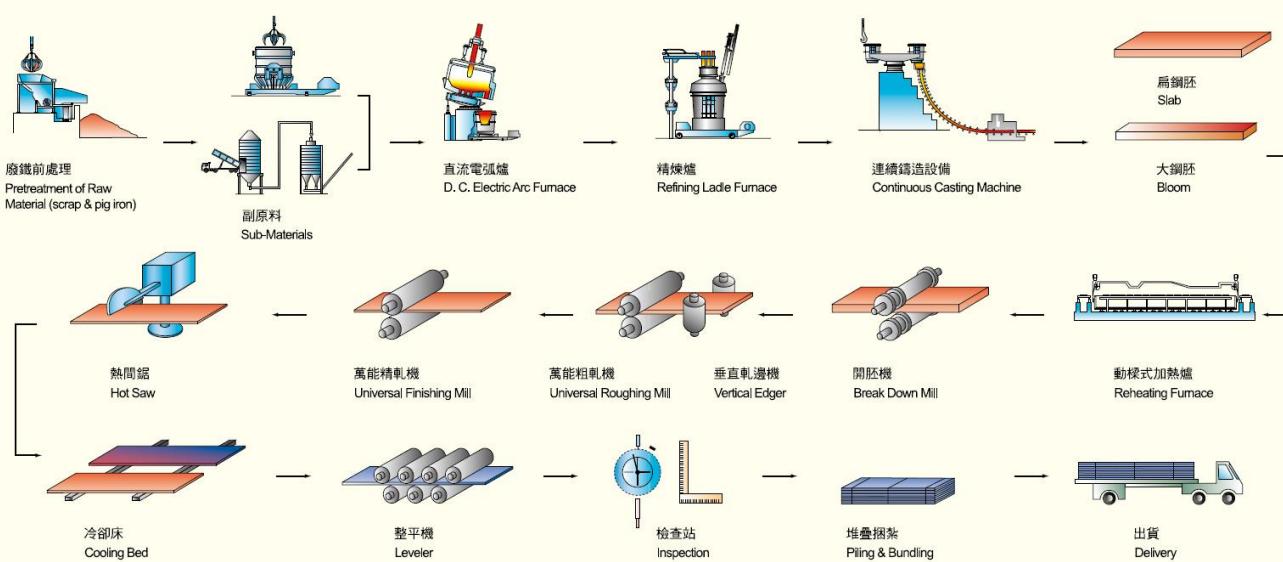

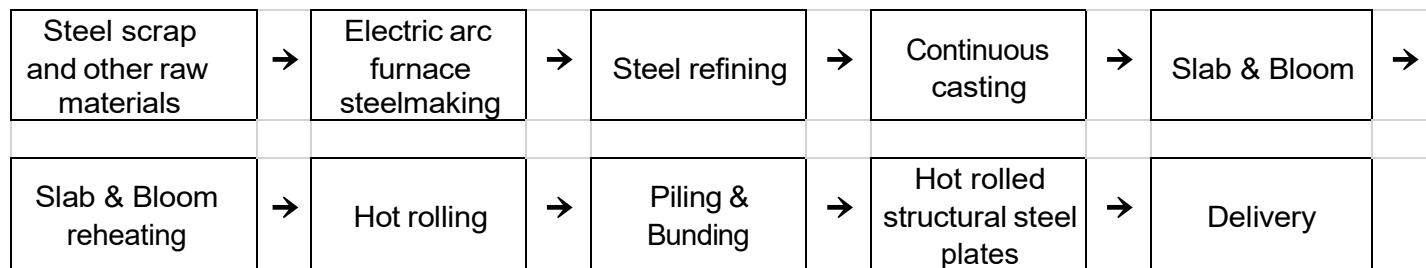

Figure 1. Flow diagram of Hot rolled structural steel plates manufacturing process

## 1.3. Application

The narrow plate steel produced by Tung Ho Steel can be manufactured according to the width requirements of customers. Without the need to make further cuts, energy and material consumption are further reduced, with greater convenience when integrating the materials into construction and faster handover periods. The product can be broadly utilized in factories, logistics warehouses, office and residential buildings, bridges, and other buildings.

## 1.4. Declaration of Methodological Framework

The Environmental Product Declaration (EPD) analysis is based on a cradle-to-gate system boundary, covering the life cycle stages from raw material extraction up to the factory gate, including production and transportation to the gate.

Given the structural function of the declared products, the use phase and end-of-life stages are excluded from the scope of this assessment.

Additional details regarding assumptions, cut-off criteria, and allocation procedures can be found in Sections 2.3, 2.4,

# ENVIRONMENTAL PRODUCT DECLARATION

HOT ROLLED STRUCTURAL STEEL PLATE

According to ISO 14025,  
EN 15804 + A2

and 2.8, respectively.

## 1.5. Technical Requirements

### Product Specification

The products own CE MARK for LRV, and can be customized in accordance with Chinese National Standard(CNS), Australian Standard(AS), Japanese Industrial Standard(JIS), European Standard(EN), British Standard(BS) and American Society for Testing and Materials Standard(ASTM). For more details of technical specifications such as: dimensions, properties and steel grade of steel plates, please visit:

<https://www.tunghosteel.com/EN/HomeEg/Product/Intro/2>

Table 1. Technical Data

NAME	VALUE	UNIT
Density	7,850	kg/m <sup>3</sup>
Modulus of elasticity	2.1	N/mm <sup>2</sup>
Coefficient of thermal expansion	11.6	10 <sup>-5</sup> /°C
Thermal conductivity	80.2	W/(mK)
Melting point	1,493	°C
Electrical conductivity at 20°C	1,030	Ω <sup>-1</sup> m <sup>-1</sup>
Minimum yield strength (für low carbon steel)	345	N/mm <sup>2</sup>
Minimum tensile strength (für low carbon steel)	450	N/mm <sup>2</sup>
Minimum elongation (für Bleche)	≥18	%
Tensile strength	≥450	N/mm <sup>2</sup>

## 1.6. Properties of Declared Product as Delivered

The products are bundled with wire for shipment and sold to distributors for delivery.

## 1.7. Material Composition

The hot rolled structural steel plates manufactured by Tung Ho is made of 100% low alloyed steel manufactured in electric arc furnace with 90% of recycled material.

The typical composition of the low alloyed is presented in Table 2.

# ENVIRONMENTAL PRODUCT DECLARATION

 **TUNG HO STEEL ENTERPRISE CORP.**

HOT ROLLED STRUCTURAL STEEL PLATE

According to ISO 14025,  
EN 15804 + A2

Table 2. The composition of the low alloyed

ELEMENT	TYPICAL CONTENT
Iron	97.50%
Carbon	0.15%
Manganese	1.25%
Silicon	0.20%
Phosphorus	0.01%
Sulfur	0.01%
Copper	0.20%
Others(Sn, V, Nb, Al, B, Ni, Cr, Mo, Ti)	0.68%
Total	100%

The product does not contain any substance listed in the “Candidate List of Substances of Very High Concern for Authorisation” (SVHC) exceeding 0.1% of the weight of the product..

## 1.8. Manufacturing

The steel structure site production flow is: Receiving steel plate materials → Assembly → Welding → Wing plate leveling → Welding bead rectification → Heat shaping → Inspection → Entry into warehouse.

## 1.9. Packaging

The hot rolled structural steel plates are packaged using bundled wire for binding.

## 1.10. Transportation

The materials are delivered to the Tung Ho Steel Enterprise Corporation Miaoli Works's fabrication facility via land, ship, and air are accounted for in the model. Transportation distance to Tung Ho Steel Enterprise Corporation Miaoli Works is calculated separately based on the supplier location.

## 1.11. Product Installation

This inventory calculation covers stages A1 to A3, and the scope of the inventory does not include Product Installation.

## 1.12. Use

This inventory calculation covers stages A1 to A3, and the scope of the inventory does not include Use.

## 1.13. Reference Service Life and Estimated Building Service Life

This inventory calculation covers stages A1 to A3, and the scope of the inventory does not include Reference Service Life and Estimated Building Service Life.

# ENVIRONMENTAL PRODUCT DECLARATION

 **TUNG HO STEEL ENTERPRISE CORP.**

HOT ROLLED STRUCTURAL STEEL PLATE

According to ISO 14025,  
EN 15804 + A2

## 1.14. Reuse, Recycling, and Energy Recovery

Hot rolled structural steel plates is easy to recycling, but it is not suggested to re-use as structural elements.

## 1.15. Disposal

The European Waste Index code for hot rolled structural steel sections is ewc-code-17-04-05 – iron and steel.

## 2. Life Cycle Assessment Background Information

### 2.1. Functional or Declared Unit

Table 3. Declared Unit: 1 metric ton of HOT ROLLED STRUCTURAL STEEL PLATES

NAME	VALUE	UNIT
Declared unit	1	t
Thickness (des Bleches)	please visit: <a href="https://www.tunghosteel.com/EN/HomeEg/Product/Intro/2">https://www.tunghosteel.com/EN/HomeEg/Product/Intro/2</a>	mm
Density	7,850	kg/m3
Conversion factor to 1 kg	1,000	-

### 2.2. System Boundary

This is a cradle to gate EPD. The following life cycle stages were considered:

A1 – Raw material supply.

A2 – Transport.

A3 – Manufacturing.

\*Not including “CONSTRUCT-ION PROCESS STAGE”, “USE STAGE” and “END OF LIFE STAGE”.

### 2.3. Estimates and Assumptions

\*The most representative overseas scrap yard is in Long Beach, USA, is assumed all scrap yards operate in the same way.

\*The most representative local scrap yard is Hongtian, is assumed all scrap yards operate in the same way.

### 2.4. Cut-off Criteria

Life Cycle Inventory data for 100% of total inflows (mass and energy) to the upstream and core module have been included. Company infrastructure, employee's transportation and administrative activities were kept out of the scope of this study.

### 2.5. Data Sources

# ENVIRONMENTAL PRODUCT DECLARATION

 **TUNG HO STEEL ENTERPRISE CORP.**

HOT ROLLED STRUCTURAL STEEL PLATE

According to ISO 14025,  
EN 15804 + A2

The material, energy, transportation, waste treatment and air emission data collected are from the year 2024, and the major data source is from the ERP system of Miaoli Works. The LCA software used for this study is SimaPro 10.2.0.0, the LCI databases include Ecoinvent & U.S. LCI Database.

## 2.6. Data Quality

The collected data were checked for plausibility and consistency. Good data quality can be assumed. Data quality assessment per information module is provided in Tables 4, 5 and 6.

Table 4. Raw material supply module data quality assessment

DATA	TIME RELATED COVERAGE	GEOGRAPHICAL COVERAGE	TECHNOLOGICAL COVERAGE	DATA SOURCE	MEASURED OR ESTIMATED
Raw materials consumption	2024	Taiwan	Modern	Tung Ho	M
Distance of scrap transportation to recycling center	2024	Taiwan	Modern	Tung Ho	M
Energy and materials consumption of scrap processing in recycling center, as well as waste and generated emissions	2024	Taiwan	Modern	Tung Ho	M
Fuels consumption and emissions related to electricity generation and distribution in Taiwan	2024	Taiwan	Modern	Tung Ho	M&E
Energy consumption and generation of emissions related to natural gas production in Taiwan	2024	Taiwan	Modern	Tung Ho	M&E
Energy and materials consumption to raw materials production for the steelworks	2024	Taiwan	Modern	Tung Ho	M&E

Table 5. Transportation module data quality assessment

DATA	TIME RELATED COVERAGE	GEOGRAPHICAL COVERAGE	TECHNOLOGICAL COVERAGE	DATA SOURCE	MEASURED OR ESTIMATED
Distance of scrap and others raw materials transportation	2024	Taiwan	Not Applicable	Tung Ho	M
Distance of auxiliary items transportation	2024	Taiwan	Not Applicable	Tung Ho	M
Distance of natural gas transportation	2024	Taiwan	Not Applicable	Tung Ho	M
Consumption of materials and energy and emissions related to the transport requirements of raw materials and auxiliary inputs	2024	Taiwan	World average	Ecoinvent	M&E

## 2.7. Period under Review

From January 1<sup>st</sup> to December 31<sup>st</sup>, 2024.

## 2.8. Allocation

There are no credits from recycling or energy recovery of packaging materials and production waste. On the other hand, this is a "cradle to gate" study, so there are no credits from recycling or energy recovery from the end of life of the product.

Table 7. Allocation

NUMBER	APPLICATION PRODUCTS	ALLOCATION PROPORTIONAL	ALLOCATION PROPORTIONAL(CALCULATED VALUE)	DISTRIBUTION METHOD	ALLOCATION PRINCIPLES DESCRIPTION

## 4. LCA Interpretation

The highest proportion of GWP-total(Global warming potential total) impact of the product is module A3 (Manufacturing), 48.42%. The highest proportion of GWP-fossil(Global warming potential fossil fuels) impact of the product is module A1(raw material supply), 46.33%. The highest proportion of GWP-biogenic(Global warming potential biogenic) impact of the product is module A1(raw material supply), 112.79%. The highest proportion of GWP-luluc(GWP from land use and land use change) impact of the product is module A1(raw material supply), 50.05%. The highest proportion of ODP(Depletion potential of the stratospheric ozone layer) impact of the product is module A1(raw material supply), 92.56%. The highest proportion of AP(Acidification potential, accumulated exceedance) impact of the product is module A1(raw material supply), 40.79%. The highest proportion of EP-freshwater(Eutrophication, fraction of nutrients reaching freshwater end compartment) impact of the product is module A3 (Manufacturing), 63.07%. The highest proportion of EP-marine(Eutrophication, fraction of nutrients reaching marine end compartment) impact of the product is module A1(raw material supply), 40.18%. The highest proportion of EP-terrestrial(Eutrophication, accumulated exceedance) impact of the product is module A2 (Transportation), 43.47%. The highest proportion of POCP(Formation potential of tropospheric ozone photochemical oxidants) impact of the product is module A2 (Transportation), 40.42%. The highest proportion of ADP- minerals & metals(Abiotic depletion potential for non-fossil resources) of the product is module A1(raw material supply), 91.00%. The highest proportion of ADP-fossil(Abiotic depletion potential for fossil resources) of the product is module A1(raw material supply), 51.81%. The highest proportion of WDP(Water (user) deprivation potential, deprivation weighted water consumption) impact of the product is module A3 (Manufacturing), 50.05%.

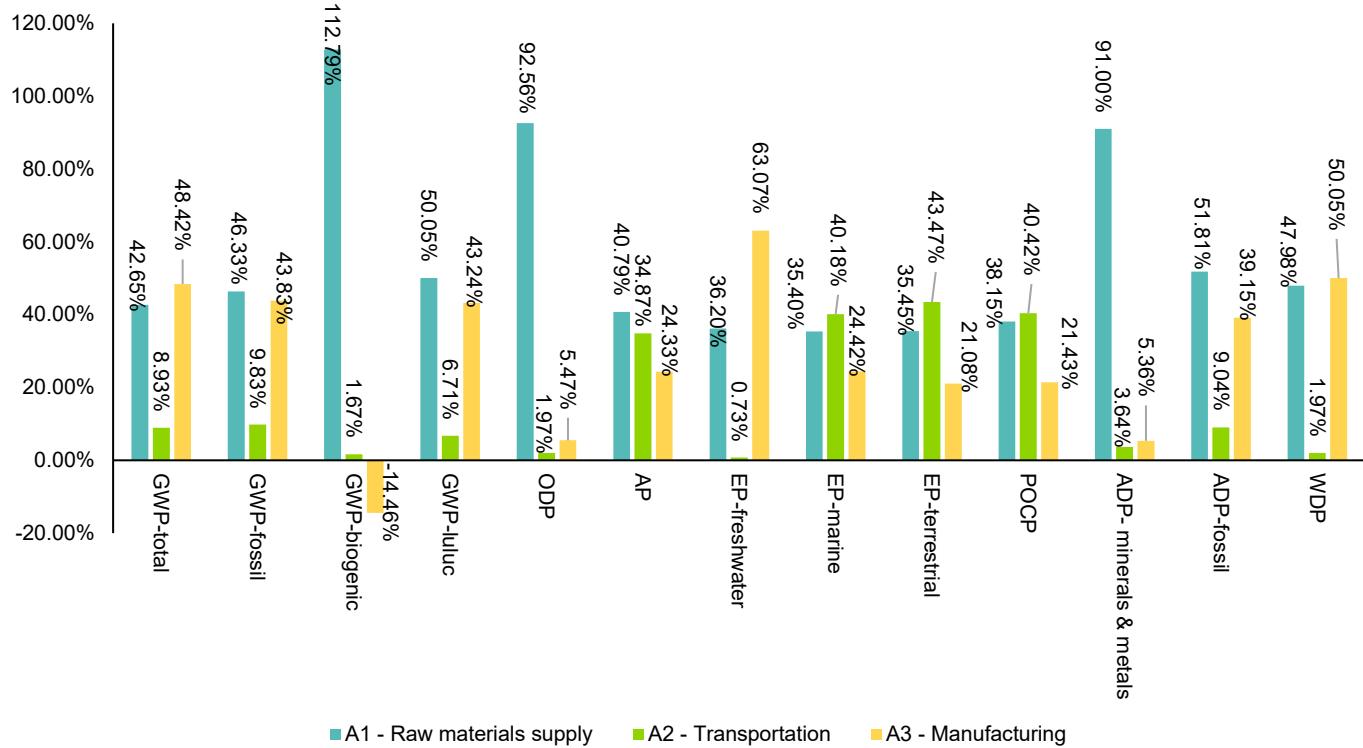

Figure 2. RESULTS OF THE LCA - ENVIRONMENTAL IMPACT

## Sensitivity Check

The study considered sensitivities of most uncertain and significant aspects of the data set, including “input of EAF COAL(DM64)”, “transportation distance of overseas scrap (DM1)” and “in put of the other electricity thermal power”. After adjusting 20% on each item and check the changes of each LCA result, the results of sensitivity check is as shown on the tables below. All sensitivities of each LCA results are under 15%.

Table 14 Sensitivity Analysis for Stage A1

IMPACT CATEGORY	ITEM OF SENSITIVITY CHECK	THE CURRENT LCA RESULT	THE LCA RESULT AFTER ADJUSTING 20% ON INPUT OF EAF COAL(DM64)	SENSITIVITY(%)
GWP-total(Global warming potential total)	EAF coal(DM64)	6.98E+02	7.15E+02	2.52%
GWP-fossil(Global warming potential fossil fuels)	EAF coal(DM64)	6.33E+02	6.50E+02	2.77%
GWP-biogenic(Global warming potential biogenic)	EAF coal(DM64)	3.62E+00	3.68E+00	1.67%

	Potential Soil quality index (SQP)	2

Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

## Critical review

The purpose of the project report is not a comparative assertion, but an independent disclosure, so the

## 5. Additional Environmental Information

### 3.3. Environment and Health During Manufacturing

Tung Ho Steel Enterprise Corporation Miaoli Works is certified according to ISO14001 Environment Management System, ISO 45001 Occupational Health and Safety Management System and ISO 46001 Water efficiency management systems.

More information can be found at <https://www.tunghosteel.com/Home/Index>.

### 3.4. Environment and Health During Installation

This inventory calculation covers stages A1 to A3, and the scope of the inventory does not include Environment and Health During Installation.

### 3.5. Extraordinary Effects

#### Fire

Special Fire Fighting Procedures - Do not use water on molten metal. Do not use Carbon Dioxide (CO<sub>2</sub>). Firefighters should not enter confined spaces without wearing NIOSH/MSHA approved positive pressure breathing apparatus (SCBA) with full face mask and full protective equipment.

Unusual Fire or Explosion Hazards - Steel products do not present fire or explosion hazards under normal conditions. Any non-oxidized fine metal particles/ dust generated by grinding, sawing, abrasive blasting, or individual customer processes may produce materials that the customer should test for combustibility and other hazards in accordance with applicable regulations. High concentrations of combustible metallic fines in the air may present an explosion hazard.

#### Water

Not relevant

#### Mechanical Destruction

Not relevant

### 3.6. Delayed Emissions

No delayed emissions are expected from these products.

### 3.7. Environmental Activities and Certifications

Environmental policy at TUNG HO STEEL ENTERPRISE CORP. Miaoli Works has achieved remarkable outcomes.

Our policy of environment, with "continuous waste reduction, maintenance of the natural environment, improvement of the working environment, and commitment to sustainable business operations" as our basic value, we make efforts to be its liaison.

Certifications:

TUNG HO STEEL ENTERPRISE CORP. Miaoli Works is certified under ISO 14064,ISO 14067 Verification Statement,

# ENVIRONMENTAL PRODUCT DECLARATION

ISO 14001 for environmental management, ISO 45001 for occupational health and safety, ISO 46001 for Water efficiency management system, and ISO 50001 for energy management.

## Environmental Policy:

[Continuous Waste Reduction, Maintenance of the Natural Environment, Improvement of the Working Environment, Commitment to Sustainable Business Operations]

Tung Ho Steel Enterprise Corporation, Miaoli Works is a specialized manufacturing facility for steel sections, steel plates, and steel sheet piles. During the production process, resources such as water, electricity, oil, and gas are consumed. To maintain the natural environment and fulfill our environmental responsibilities, we provide appropriate protective equipment and facilities, implement operational controls, and continuously improve the working environment and reduce environmental impacts. We are committed to the following:

1. Promote industrial waste reduction, energy conservation, and process improvement to ensure compliance with regulations regarding air, water, and waste management.
2. Achieve environmental management performance through a spirit of continuous improvement and pollution prevention.
3. Comply with government environmental protection laws and regulations as well as the operational standards established by our plant.
4. Establish an environmental management system to set and review environmental goals and targets.
5. Develop operational standards and provide environmental education to employees, enhancing their ability to manage the environment independently and recognize their responsibilities through collective consensus.
6. Establish effective communication channels with relevant groups and nearby residents to help them understand our environmental policy and practices, working together for the environment.

More information on TUNG HO STEEL ENTERPRISE CORP's certifications environmental activities can be found at <https://www.tunghosteel.com>

## 3.8. Further Information

Additional information can be obtained from <https://www.tunghosteel.com/Home/Index>

## 6. Conclusion and Recommendation

This LCA Report has provided an assessment of the potential environmental impacts associated with the system boundary "cradle to gate", including module A1(raw material supply) & module A2(transportation) & module A3(manufacturing). The LCA software used for this study is SimaPro 10.2.0.0, the LCI databases include Ecoinvent 3, EF database 3.1, EF Database 2.0, Ecoinvent unit processes, Ecoinvent system processes, USLCI+, and LCA Database, and LCIA methodologies include EN 15804 + A2 Method version 1.03, EDIP2003 version 1.07, AWARE version 1.07, and Cumulative Exergy Demand method version 1.09.

The specific site of this study is located in Miaoli County, Taiwan. However, most of databases we used as environmental impact factors are not local database. In the future, if the local government can develop more databases of environmental impact factors, it will be very helpful for preciser assessment of the potential environmental impacts. The study is not intended to support comparative assertions intended to be disclosed to the public.
